MEASUREMENT AND EVALUATION, 1966-67 (P.L. 89-10, TITLE I). ANNUAL REPORT.

BY- BARNES, EDWARD G.

GEORGIA STATE DEPT. OF EDUCATION, ATLANTA

PUB DATE 1 DEC 67

EDRS PRICE MF-\$0.50 HC-\$4.92 121F.

DESCRIPTORS- \*COMPENSATORY EDUCATION PROGRAMS, \*PROGRAM EVALUATION, \*DISADVANTAGED YOUTH, \*FEDERAL PROGRAMS, STUDENT TESTING, READING ACHIEVEMENT, ACHIEVEMENT TESTS, ATTENDANCE, DROPOUT RATE, HIGHER EDUCATION, SPECIAL EDUCATION, PROGRAM COSTS, FOOD SERVICE, NUTRITION, STATISTICAL DATA, SUMMER PROGRAMS, READING PROGRAMS, TEACHER AIDES, TEST RESULTS, PROGRAM ADMINISTRATION, PRIVATE SCHOOLS, ANNUAL REPORTS, HANDICAPPED CHILDREN, GEORGIA, ESEA TITLE 1

IN THIS ANNUAL EVALUATION REPORT THE COMPENSATORY EDUCATION ACTIVITIES AND METHODS OF ELEMENTARY AND SECONDARY EDUCATION ACT TITLE I PROGRAMS IN GEORGIA ARE DESCRIBED ACCORDING TO THE FORMAT STIPULATED BY THE OFFICE OF EDUCATION. THE EXTENSIVE STATISTICAL DATA WHICH CONSTITUTE THE BULK OF THE REPORT GIVE ACHIEVEMENT TEST RESULTS, ATTENDANCE AND DROPOUT RATES, AND THE AMOUNT OF THE PARTICIPANTS' HIGHER EDUCATION. SPECIAL REPORTS, WHICH CONTAIN DATA, ARE PROVIDED ON SCHOOL FOOD SERVICES AND SPECIAL EDUCATION PROGRAMS FOR HANDICAPPED CHILDREN. AMONG MAJOR ACHIEVEMENTS, IT IS REPORTED THAT READING PROGRAMS HAVE RAISED STUDENTS' ACHIEVEMENT LEVEL, THE USE OF TEACHER AIDES HAS BEEN EFFECTIVE, AND SUMMER SCHOOL PROGRAMS HAVE BEEN A SUCCESS. IT IS ALSO FELT THAT TITLE I EXPENDITURES ON EARLY CHILDHOOD EDUCATION HAVE ENCOURAGED THE INSTITUTION OF STATEWIDE PUBLIC KINDERGARTENS. (LB)

EVALUATION ON MEASUREMENT AND EVALUATION 1966-67: (P. L. 89-10, Title I)

ANNUAL REPORT
ON MEASUREMENT AND EVALUATION
1966-67
(P. L. 89-10, Title I)

Prepared by: Edward G. Barnes, Coordinator Measurement and Evaluation

State Department of Education Jack P. Nix, Superintendent December 1, 1967

### 1966-67 ANNUAL REPORT MEASUREMENT AND EVALUATION

Submitted to the Bureau of Elementary and Secondary Education of the United States Office of Education, Department of Health, Education and Welfare in response to:

Section 205 (a) (5) and Section 206 (a) (3) of Public Law 89-10 and a letter request from the Bureau of Elementary and Secondary Education, dated August 14, 1967, as amended.

Date

Jack P. Nix Superintendent of Schools Georgia State Department of Education

Appendix A

Pre Test and Post Test

Pre Test or Post Test

Appendix B

Attendance Data

Appendix C

Dropout Data

Appendix D

Continuing Graduate Data

Appendix E

Special Report on Programs for the Handicapped (Under Separate Cover, December 15, 1967)

Appendix F

Special Report on Food Service Programs under Title I (Under Separate Sever, Secember 15, 1967)

Appendix G

Representative LEA Sample Data (Under Separate Cover, December 1, 1967)

### SECTION I: MAJOR ACHIEVEMENTS

- A. Approximately one eighth of the total monies spent for Title activities was spent for summer school activities. The achievements of Title I beneficiaries in summer school can be recognized in the pursuit of many schools in the State towards the twelve month school year. Subjectively the comparative analysis of the 63 Title I summer school projects in the State indicates that summer schools operated with a high gain in attitudes and achievement for Title participants. The institution of non-tuition summer programs and their subsequent acting force towards a twelve month school constitutes a major achievement.
- B. Although kindergarten and pre-kindergarten education have been long recognized in Georgia as desirable, the impact of Title I monies on early education has been massive. LEA's have indicated the need for an early attack on educational problems and the need has centered on obvious gaps in the overall plan of public education in Georgia. Title I helped initiate—kindergarten programs in 1966-67. The evaluation of these programs and the impact of the LEA's on the State legislature has helped to cause a primary political pressure to institute public kindergartens in the State of Georgia.
- C. The 'evelopment of reading programs to raise the rate of achievement for the educationally disadvantaged Although supporting statistical data is insufficient to make a definitive and objective evaluation, the present gross statistical data does corroborate the subjective evaluations of teachers, administrators and students that the reading programs are achieving their objectives. The Atlanta City System "Lead Reading Teacher Program" indicates statistical significance in the rate of gain in achievement by Title I participants over a non-Title I participant control group. Generally pre and post test results on the California Achievement Test (most prevalently used test in Georgia) indicate gross gains in average raw scores and percentile ranks for all grades. These reading programs have also allowed for field testing of many different instructional methods, equipment and facilities towards the resolution of the problem of low rate achievement in reading for the educationally disadvantaged.
- D. The incorporation of teacher aides as part of the school organization and teaching methods—There are rising expectations throughout the State for the utilization of teacher aides in effecting an implicit reduction in teacher load and in essence a reduction of the pupil/teacher ratio. Explicitly the use of teacher aides has reduced the pupil/adult ratio. Systems State-wide have lauded the use of teacher aides. Two systems in the State have done some d finitive evaluations on Teacher aides—Bibb County and Atlanta City systems. These two evaluations indicate that teacher aides are instrumental in positively affecting student achievement and attitude to a significant degree.

### SECTION II: DESCRIPTION OF ACTIVITIES AND METHODS

A. SEA Services to LEA's

**ERIC** 

(1) Project Development

- a. Proposal application--The SEA provides five Area Consultants who explain the SEA and OE minimum requirements and guidelines for projects to be funded. These consultants also act to disseminate information on evaluation and to help evaluate assistance in subject matter area program planning and evaluation.
- b. Subject matter consultants--The SEA provides consultants in major subject matter areas such as mathematics, science, reading, art, elementary education, foreign language, social science, music, special media, health and physical education, food service, handicapped child, etc.
- c. Ancillary services consultants--The SEA provides consultants in areas such as guidance, food services, social worker, accounting, etc.
- (2) Project Evaluation: Although each subject matter area has provided, through requested consultation, evaluation information to the LEA's upon their request; the SEA provided the Unit on Measurement and Evaluation to coordinate the evaluation activities of the SEA, and to develop overall strategies for the evaluation of Title I programs. This unit also acted to disseminate information on testing, evaluation guidelines, promising educational practices, etc. The unit conducted regional meetings on evaluation guidelines and evaluation stategies for LEA's.
- B. Most pressing Educational Needs: The five most pressing educational needs in the State have been determined in rank order to be:
  - (1) Over 85% of the educationally disadvantaged program participants read below the national norm indicated by pre and post test data on Title I participants; and by preference and support of a preponderance of administrators who have included reading activities in their Title I programs. The 1966-67 Title I program for the State of Georgia included 155 reading activities in 169 projects by 159 systems.
  - (2) One hundred nine activities for food service were included as part of the Georgia Title I program to attack the persistent need of the disadvantaged child's nutritional deficiencies. The inclusion of this service 109 times is an indication of need by opinion and action of administrators and local staff involved in the determination of needs of the educationally deprived. See Appendix.
  - (3) The inclusion of Physical Education activities in 79 Title I projects has indicated that culturally deprived students are in great need of activities that will make them more physically fit and will teach them habits of personal hygiene which will help to maintain better physical well being.

- (4) Although it has been recognized that the educationally deprived have not had the "know how" to maintain themselves physically, it is well recognized that the deprived child has incurred physical defects by the time he is reached by a Title I program activity. Thus, a need has been for medical and dental services for the deprived child. Sixty medical service activities and 31 dental activities were included in 169 projects in 159 systems. The inclusion of these activities is an indication of their relative need.
- (5) Almost all studies and rationales developed to support and justify project activities have indicated in some way that the disadvantaged child has lacked verbal experiences in his background. This particular need has been attacked by numerous methods. The methods have led to the introduction of a greater number of adult personnel into a closer relationship with the disadvantaged child, e.g. team teaching, social workers, librarians, guidance workers, special tutors, teacher aides, etc. The use of teacher aides by systems employing their services has been lauded specifically by the "migrant child" and the "neglected and delinquent child" programs. The Bibb County and Atlanta City systems have reported statistically significant results in the use of teacher aides as a means of positive increases in achievement and attitudes for the disadvantaged child.
- C. Most Frevalent Project Objectives and most common Approaches in rank orders:
  - (1) To improve reading skills:
    - a. Special reading classes with reading teachers.
    - b. Reduction of pupil/teacher ratio.
    - c. Special equipment and instructional aids including mobile labs.
    - d. Additional library services.
    - e. Teacher aides.
  - (2) To improve nutrition: this objective.....
    - a. Free lunches, snacks and breakfast.
    - b. Additional dietetic and cafeteria personnel.
    - c. Cafeteria equipment.
  - (3) To improve physical well being.
    - a. Physical education personnel.
    - b. Physical education equipment.
    - c. Recreational programs.
  - (4) To improve health....
    - a. Physical examinations and referral.
    - b. Internal medicine and minor surgical treatments.
    - c. Dental services.
    - d. Extended cooperation with local departments of health.
  - (5) To improve skills in other areas:
    - a. Additional teachers.
    - b. Additional equipment and instructional materials.
    - c. Addition of teacher aides.
    - d. Addition of in-service training for staff members.

- D. Title I Activities and Those of Other Federal Programs.
  - (1) Title II, III, IV and V interrelationships:
    - a. As in 1965-66 school year the greatest relationship between the Title? funds were used chiefly to supply personnel and facilities while Title II funds were used for the aquisition of books and other instructional materials, however; funds were used from both Titles to purchase books. There were 86 "Library Services" activities in 169 projects under the Title I program.
    - b. Joint planning between Title I and Title III did not generally occur. Specific instances of interrelationships are exampled by the Albany City and Washington County Systems. Albany's Title REI provides an extensive plan for automated information handling and is presently keeping attendance data by optical scan sheets and the system will provide better information retrieval for Title I evaluations. The Washington County System's Title III provided testing for several surrounding counties whereby an attitude, experiences survey and reading tests were used to screen thousands of students; which supplied Title I evaluators with "baseline" data.
    - The SEL has conducted several conferences to which Title I personnel have been invited on a selective basis. An SEL program was conducted in Ft. Lauderdale, Florida on the migrant child which some Title I administrators attended. The SEL conducted a program on evaluation in Gainesville, Florida for Title I evaluators.

The SEL in the Atlanta office work with the Regional Curriculum Laboratories (Title V funded) logistically and the Regional Curriculum Laboratories in turn worked with some systems using Title I funds. Specifically with Bibb County on the development of a course to develop "critical thinking."

- d. Title I and Title V were specifically interrelated in Georgia in that Title V provided State department personnel who then acted as consultants to LEA's on Title I activities. Title V also provided E. D. P. services which have provided computer facilities on such items as Title I food service activity surveys for the SEA with subsequent reports to LEA's having food service activities. The E. D. P. Unit is an SEA staff service function.
- Title I participants with Title VA of NDEA funds for testing. The coordination of the testing has resulted in more expansive testing programs in some cases and/or a release of funds normally used for testing to be utilized for other priority established needs.

- (2) U. S. Department of Agriculture Food Program--The Paulding County System has had food demonstration personnel go into homes of Title I participants to demonstrate how to use surplus commodity foods. However; the coordination of these two programs is negligible and formal integration of the two programs has not occurred.
- (3) Community Action Agencies.

\*\*\*

a. Included in its Part II, Project Application, each school system must describe its cooperation with the Community Action Agency in the development of the project. It must also include a statement of Community Action Agency review of the project if a local Community Action Program is operating in the given community.

Agreements have been entered into between officials of the State Department of Education and the State Department of Family and Children Services to establish procedures for coordinating their efforts under the provisions of the Economic Opportunity Act of 1964 and the Elementary and Secondary Education Act of 1965. These agreements include requirements for cooperative planning at the local level by the persons most closely associated with the administration of the two Acts. Representatives of each Department have attended numerous conferences of the other Department as participants.

In the event that a satisfactory "Statement by Community Action Agency" is not received with a Title I project application, the agreement which has been worked out between the Office of Education and the officials of the Office of Economic Opportunity will be put into effect.

The State Technical Assistance Officer is in the State Department of Family and Children Services.

- b. When an approved Community Action Program was in effect in a given community, the LEA was required to contact the CAA for joint planning and/cr discussion of the proposed Title I project. The CAA provided a letter (attached to the Title I project application) stating that there was no overlapping or duplication of efforts in the projects of the two agencies and that the CAA endorsed the Title I proposal. The two programs reinforced each other in several ways. The following examples are in quotes:
  - (a) "Title I furnished the educational equipment for Headstart including films."
  - (b) "Community Action Agency projects are designed to aid students not actively enrolled in public schools. The NYC program does offer part time employment to students needing financial assistance in order to continue their education.

There are approximately 35 students employed through this NYC program during the summer months with approximately one-third of these students being employed at educational institutions."

- (c) "The Community Action Committee, the Upper Ocmulgee Opportunity Commission, Inc., and the Childrens and Family Services all work cooperatively together. The interrelationship between these agencies affords better service to our community."
- (d) 1. "The Hall County Title I Summer Reading Program and the O.E.O. Summer Head Start Program are held at the same locations. The Hall County Board of Education furnishes classrooms and lunchroom facilities for the O.E.O. Head Start Program."
  - 2. "The Hall County Board of Education furnishes transportation for the O.E.O. Summer Head Start Program"
  - 3. "In exchange for transportation, O.E.O. furnishes food services for Hall County's Title I Reading Program."
  - 4. "O.F."). pays part of the utilities for the Hall County Title I Summer Reading Program."
  - 5. "3.E.O, pays part of the custodial supplies for the Hall County Title I Summer Reading Program."
- (e) "Our county had a Head Start Program last summer. The two programs were mutually reinforcing, since Head Start helped prepare the economically deprived child for school, and Title I provided funds to help the educationally deprived after he entered school. These children, in many cases, were identical."
- (f) "During the latter part of the summer transportation was furnished by the City Transit Company for the boys and girls to go swimming at Albany State College. The Community Action Program paid the transportation and lifeguard fees for all boys and girls who desired to swim."
- (g) "The Food Distribution Program ties in with Title I Program under which children receive free lunches.

These same families are being served by the Community Service Aides in the area. These Aides assist in taking the pre-school children to the health clinic. They, along with the Food Distribution staff, help in the Re-habilitation Program and serve as contacts to place persons in "Operation Mainstream" for employment. They have encouraged and assisted in rodent and pest control. Their efforts are coordinated to upgrade those persons and families to be served under Title I. They assist in the enrollment of persons in Adult Basic Education classes and all pending projects pertaining to upgrading the poor.

The NYC serves families in the low-income brackets by furnishing employment to students in order to keep them in school. Many of these same families are being served under Title I."

- (h) "Public school personnel met with personnel from the Slash Pine Area Planning and Development Commission to determine the activities that would supplement their programs. The Title I buses were used this summer to transport the children to the Head Start Program financed through the local CAA. Also children from the Neighborhood Youth Core were utilized in summer Title I programs. The school system uses the welfare agencies and other groups to bring additional services to the school children."
- (i) "The Neighborhood Youth Corp students worked closely with all the schools involved in this program. They met on monthly basis with the Altamaha Community Action Committee for in-service meetings."
- (j) "The Title I Project served in an area where both Head Start and a Child Development Center were operated by a Community Action Agency. All the children from these Community Action programs made visits to the Science Center built by Title I funds. Information regarding some of the Title I families came from the community action agencies mentioned. Neighborhood Youth Corps members helped to clear and clean the yard around the Science Center.

The two programs provided job opportunities for citizens and students although jobs varied in duties for students and adults. The economic status of each family involved was up-graded: Food, educational opportunities and other aspects were provided by both programs.

### Job Opportunities Title I

Teacher Aides
Attendance Offices
Clerk
Part-Time Bookkeeper
Social Worker
Band Instructor
Reading Teacher
Librarian
Co-ordinator
Assistant Co-ordinator

### Community Action Program

Neighborhood Youth Program In
School
Neighborhood Youth Program Out
of School
Surplus Commodities (Food
Distribution)
Health Nurse (Neighborhood Service
Center)
Program for the Aged (Talent Bark)"

- (k) "Many evidences of cooperation between Community Action Agency and the local educational agency are paramount. Many meetings have jointly been held in order to coordinate services. The Community Action Agency provided funds for Neighborhood Youth Corps and also provided Surplus Foods to families in our area. Four members of the local Community Action Agency are members of the West Central Georgia Community Action Council. One-fourth of the local Community Action Agency are staff members of the local educational agency. Projects of both agencies are discussed prior to Title I applications each year."
- (1) "Many of the economically and educationally deprived students who ben fitted from the instructional and food activities under Title I came from the homes which were visited by the Homemakers Aides, a program under the sponsorship of the Community Action Program. The purpose of the Homemaker Aides program is to assist the mothers in improving the over-all conditions in the home to make the best with what she has."
- (4) Neighborhood Youth Corps: The NYC was used chiefly to supply teacher aides, guides, school maintenance personnel and in transportation of Title I participants. Examples of how NYC personnel are used are indicated in (3) (b), (g), (h) and (i) above. A representative sample of 80 projects gave 42 projects in which NYC personnel were used.
- (5) Job Corps: No interrelationships noted or reported.
- (6) Welfare Administration Programs: None reported as such.
- (7) Medical Aid to Indigent Families: None reported specifically.
- E. Staff Development and Utilization.
  - (1) SEA methods used to concourage staff development and utilization.

    (a) Development- The SEA has encouraged the inclusion of inservice training programs in projects where training programs have not previously been in effect through SEA project application consultants. Sixteen projects included in-service training programs towards the development of staff.
    - (b) Staff Utilization—The SEA has encouraged the use of teacher aides as a method by which the teaching staff may be more effectively utilized.
  - (2) IEA methods used in the development and utilization of staff.

    (a) Development—The principal method used has been inservice training. A more probable effective method has been the attendance of teachers to "institutes" sponsored under other "Acts or Titles" and college courses on extension basis subsummed under inservice training.

Specific evaluation of these kinds of training are exampled by the Bibb County system report on their "Bibb Teacherstudent Improvement Program Project Oll-Oll-67-1," which is included in this report as part of the LEA "Representative Sample."

(b) A more effective utilization of staff has been accomplished by LEA's in areas such as reading, science, math, Libraries, etc. through the use of teacher and administrative aides, the NYC additional clerical help, and additional staff such as nurses, psychologists, guidance personnel, etc. Thus, many programs have had a synergistic effect upon one another.

### F. Involvement of Non-Public School Chaldren

a. The necessity for including eligible non-public school children in projects has been emphasized to local school administrators through personal contacts and group conferences as well as through printed copies of the Act, Regulations and Guidelines.

The description of each project activity or service or set of related activities and services in the project application must contain information relative to the nature and extent of the involvement of non-public school children in the activity or service. If non-public school children are not to participate, the reason for non-participation must be satisfactorily explained before the project is approved.

b. Cooperation between public and propublic school officials relating to Title I projects has been good. Non-public school officials have participated in project planning and project orientation activities. There has been no known conflict between the two types of officials.

Perhaps the greatest amount of non-public school-child participation was in summer projects which provided remedial instruction. It is, of course, much easier to get non-public pupils to take part when regular term school classes are not in session. In such instances the non-public pupil has participated on the same basis as the public school child.

- c. Savannah City and Chatham County School System's programs for "Youth Concert and Instrumental Music Project," "Tutorial Reading," and "Corrective Reading" are cited as innovative by nature of the administrative and coordinative effort required of the public school and the non-public school to present these programs as an integral part of their present on-going programs. A duplicated count indicates 297 non-public school children were served by these programs on and off of public school grounds. The LEA evaluation indicated no problems and further indicated that the program enhanced the relation and insured further cooperative efforts between the public and non-public schools in the area.
- d. The following examples indicate the participation and non-acceptance by non-public school systems in Title I activities.

- (1) There were no problems encountered in this Youth Concert and Instrumental Music Project--199 NPSG, with regards to the participation of non-public school children. Since the enactment of Title I and the implementation of Title I projects by the Board of Education, a fine working relationship has been established between the Board of Education and the authorities at the non-public schools. All projects have been received with enthusiam by the non-public schools.
- (2) The IEA did not experience any problems in implementing this Reading Clinic Project--35 BP NPSG in its relationship to participation of non-public school children. The representatives of the non-public school in our county were most cooperative in supplying us with necessary information, etc. The non-public school has used our services for their educationally disadvantaged children and are very enthusiastic about the Title I program in our county.
- (3) Oak Mountain Academy is the only non-public school in this attendance area. Approximately 35 Carroll County school age children attend this school.

During the latter part of July, 1966 and the first week of August, 1966; several conferences were held with the headmaster and the president of the academy. The Carroll County Board of Education Title I program was discussed in detail at these conferences.

On August 9, 1966 the LEA received a very cordial letter from the President of Oak Mountain Academy which contained the following paragraph: "The Oak Mountain Academy includes and operates a kindergarten for four and five year old children in the academic program of the school. We do not have at the present nor do we anticipate in the future children enrolled in the Academy who would qualify for the commendable opportunities which you offer."

Also the Headmaster expressed the feeling that due to the low pupil/teacher ratio maintained at the Academy they could adequately take care of the remedial instructional needs of its pupils.

- (4) There have been no problems in developing and implementing this Reading project in its relationship to participation by non-public school children. The Mother Superior and teachers of St. Joseph Academy have utilized the Title I facilities and materials and have been very cooperative in planning and implementing Title I activities.
- (5) The non-public school children attending the Seven Day Adventist School, also the children residing in the Calvary Children's home were invited to participate in this program; however they did not accept.

- (6) Eligible pupils from the non-public schools in our county participated in the summer Reading Improvement Program. They did not participate in the school year program because of transportation problems and the time taken away from their regular scheduled school work could not be worked out.
- (7) This summer Reading project was planned to include children from the local parochial school. The Mother Superior was notified concerning the program and indicated a willingness to participate The teachers at the Catholic school recommended nine children to participate in the program and all nine were included.
- (8) The administration of the St. Joseph's Catholic School cooperated with the public schools in:
  - 1. Providing information to parents of eligible students.

2. Screening students who participated.

3. Making test information and records available.

4. Meeting the coordinator and administrators to discuss progress of programs.

5. Providing facilities in which twenty-eight of their students were given the California Reading Achievement Test by our guidance counselor.

6. Using Title I recordings and filmstrips.

- 7. Bormowing the following Title I materials for use during the school year 1966-67: 1 record player, 1 Dukane, 1 tape recorder, 1 overhead projector.
- G. Programs Designed for Handicapped Children

A special evaluation report on programs designed for handicapped children is being prepared by the Division for Exceptional Children and will be forwarded under separate report on or before December 15, 1967 to the Programs Development Branch of the B.E.S.E. as part of appendices of this report.

- (1) The SEA promoted programs for the handicapped primarily through the efforts of a consultant for the handicapped, employed from Title I funds, in the Division for Exceptional Children. Five other consultants from this Division were also utilized somewhat more indirectly. No specific seminars or conferences were sponsored by the SEA. The SEA prepared a brochure titled, "Types of Programs and Services for the Exceptional Child under Title I," which was disseminated to all I A's.
- (2) The .six most effective types of programs are cited here in rank order of their effectiveness:
  - a. Special Education for the Handicapped and Speech Impaired.
  - b. Speech Therapy.
  - c. Pre-Service Training.
  - d. Psychological Services.
  - e. Teacher Aides.
  - f. Integration of the Child into the Regular School Program.

- (3) Some sample statistics on programs for the handicapped by LEA's are:
  - a. Four systems operated programs in Speech Therapy at a total cost of \$19,332 for 490 children at a per child cost of \$39.00.
  - b. Nineteen systems operated programs in Special Education for the Handicapped at average cost of \$242. per child for a total of 2,179 children with a total cost of \$529,335. The following is a "breakdown" by type of Special Education.

Crippled	27
Hard of Hearing and Deaf	32
Mentally Retarded	1459
Emotionally Disturbed	40
Visually Handicapped	26
Other Impaired	595

c. The total of all IEA handicapped programs included 15 instructional areas and 16 service areas for 11,067 children at a total cost of \$918,492. giving \$108./child average expenditure. The following is a "breakdown" for number and type of handicapped child served:

Crippled	123
Hard of Hearing & Deaf	144
Mentally Retarded	7414
Emotionally Disturbed	829
Speech Impaired	1117
Visually Handicapped	360
Other Impaired	1080

### SECTION III: PROBLEMS RESOLVED

A. The Non-uniformity of test data results has been a major problem in aggregating data. The "breakdown" requested by the SEA and the OE has requested the standard deviation. Most systems lack the trained personnel to develop the standard deviation as a statistic. The Unit on Measurement and Evaluation developed simplified routines by which the standard deviation could be calculated. These routines proved to be of very limited value.

The SEA contacted the regional office in charge of sales for the California Achievement Tests and appraised them of these information problems. Subsequently, the California Test Bureau has instituted a reporting service that gives machine print-outs with the desired information at a cost of five cents per student. The California Achievement Series is the most prevalently used test in Georgia by system and grade. This will aid in the full resolution of the problem.

At this point the SEA decided that it was futile to expect untrained personnel to calculate a standard deviation; consequently, the request for a standard deviation has been eliminated; however, the source problem of untrained evaluators remains.

- B. The processing of applications for runding has been a problem in the past with the ebb and flow of applications near deadline dates. This problem has ameliorated considerably through the efforts of the Office of the Director of Title I and its area coordinators. However; this 'iog-jam' of applications near deadline dates still presents some problem.
- C. Project applications contain much of the information to be utilized in the State evaluation of Title I. During the 1966-67 fiscal year projects were funded which included regular term and summer term activities under one project application. This method created difficulty in the comparative evaluation of the two terms. This problem was resolved by requesting separate project applications to be submitted for the summer and the regular terms.
- D. The lack of trained personnel in the area of evaluation (which includes planning, development and dissemination) has prevented definitive evaluations of Title I activities. This problem is complexed by: the reluctance of local planning agents to commit monies to effect evaluations; the unavailability of trained personnel; a lack of understanding of the evaluation function and its broad meaning by the IEA, SEA and OE personnel; and a lack of administrative mandates and directions from the OE, SEA and the IEA which will formulate definitive evaluations which will approach a cost benefit analysis. To alleviate this problem legislation or mandate should be provided which will establish minimum rates and/or dollar amounts to be expended on evaluation. Further, a criteria should be established by which dollar incentives might be awarded to these systems that provide exemplary evaluations and/or meet the established criteria.

4. The unavailability of uniform and standard information about Title I programs and participants poses a problem which could be relieved by a new direction of monies through legislation. The administrative expenditure by the SEA should be raised to provide for the establishment of systems whereby uniform data may be collected i.e. "data bank," regional and state computer system; electronic data processing; statewide testing program; development of a data gathering instrument which will be compatible for all information requests; and a uniform dissemination system.

### SECTION IV: EXEMPLARY ACTIVITIES

- A. 1. Atlanta Public Schools project 060-203-67-1. Lead Reading Teacher Activity (LRT).
  - 2. The objective was to define the relationship between the LRT's and the classroom teacher and the subsequent effect of LRT's on the achievement and attitudes of the pupils in which LRT's assisted the classroom teachers.
  - 3. A rating scale, the <u>Lead Reading Teacher Role Survey</u> (LRTRS) was developed to determine the nature of the role of the LRT as perceived by the classroom teacher. The mean reliability coefficient of the LRTRS was established as 0.86 through the use of Fisher's Z transformation on groups of classroom teacher responses to six randomly drawn LRT's.

Teacher responses to the LRTRS were factor analyzed by BMDJ3M. Teacher responses were standardized with a mean of 50 and a standard deviation of 10. T-tests were computed between teachers who made high and low utilization of LRT services. Student achievement from third, fifth and seventh grade was sampled from classroom teachers who indicated; high use and low use of LRT's. Classroom teachers samples were given the Teacher Characteristics Schedule (x, y and z scales only); and the items were used to covary the effects of teacher effectiveness upon pupil achievement and attitudes.

Teachers administered a semantic-differential (SD) type (after Osgood) attitude inventory to their classes and were given the California Test of Mental Maturity (CTMM). The language quotient of the CTMM used as a measure of reading achievement. Each scale on the SD scores were analyzed using the Analysis of Covariance Computer Program ("Mugals" version of July 12, 1966.)

Pupils in classrooms where LRT's were used to a high degree made significantly higher gains in achievement as indicated by results from the language portion of the CTAM over pupils in classrooms where LRT's were utilized to a low degree. The mean of the "high use" group was 91.6 while the mean of the "low use" group was 84.4. No significant differences were found between the non-language scores of high and low use groups.

Finally, the "high use" group indicated significant positive changes in attitudes towards "reading out loud" and generally favorable responses in other areas of attitudes than the "low use group."

- B. Walker County Project 146-146-67-1 Activity .- Reading.
  - 1. The stated objectives included: "improvements in reading ability;"
    "improvements in pupil attitude;" and "improvements in pupil performance of regular classroom work.
  - 2. This regular term activity included 595 participants from grades 1-8 and employed the use of five \frac{1}{2} time reading teachers; a \frac{1}{2} time psychologist; one administrative coordinator along; one secretary and 14 teacher aides.
  - 3. Initially all participants completed an "Informal Reading Inventory" and the "Gates McGinite Reading Tests" and then took post tests to refelct gains. Attitudes we measured by using an opinion questionnaire given to 95 teachers and 143 pupils.
  - 4. Children met in small intimate groups wherein each child was encouraged towards verbal expression, self confidence and a chance to express personal feelings, thoughts and ideas. Emphasis was given towards recreational reading. "These group sharings also help to establish the importance of listening skills. Teacher aides help in lowering the pupil/adult ratio. Generally facilities were too crowded even though money was provided for minor modifications and repair. However, the additional equipment and instructional mids were most helpful. The instructional materials included crayons, ABC manuscript cards, Dolch Game and Word cards, McCormick-Mathers Phonics Skill Builders-Teacher editions, Ginn Reading Skill Charts, Cardboard TV Viewer, Phonics Records, Speech to Print Phonics Kit, Durrell Analysis Kit, IRIT, PPVT, Mills Learning Test Kit, Library books, Lippincott Basic Reading Texts, Holt, Rinehart & Winston "Sounds Patterns of Language Readers" and Reader's Digest Skill Builders."
  - 5. Ninety-five per cent of the teachers felt that the Title I Reading experience has benefited the pupils while 98 per cent indicated they wanted the program continued. Student opinion on the program question-naire did not indicate significant changes in attitudes towards school or reading.
  - 6. Generally absolute gains were made in achievement for the early grades, but middle grades experienced little progress. All grades made some gain in relation to national norms.
  - 7. Generally recommendations include:
    - a. Do more work with parents towards attitude change towards school.
    - b. Do depth evaluations by random sampling.
    - c. Provide extensive explanation of Title I reading activities to all teachers.
    - d. Provide a professional evaluator to prepare objectives, assist in planning and to gather data.

- C. Bibb County Project Oll-Oll-67-1 Summer Workshops. Activity for English Language Art.
  - 1. This activity, entitled "Summer Enrichment Program for Low-Income Area Students in Art and English and Teacher Workshops in New Media," consisted of three workshop programs conducted at the Instructional Materials Center. Three workshops in Art were held in the BIMC Art Center for college-bound high school graduates from low-income areas; three workshops in English Vocabulary and Usage were held in the BIMC Language Laboratory for similar students; and two workshops in New Media Production were held in the BIMC Media Production Area for teachers from target area schools. Consultants and teachers specializing in the appropriate areas were used to plan and direct the workshops.

Section B - English Workshops, evaluated by Mr. Burney Lester, Director.

- 2. The objective of this activity was to instruct teachers in using special media available through the BIMC for English Language Arts. Fifty-three teachers were selected as participants for the two workshops. A survey form was mailed to each participant at the beginning of the program. Specialists in the area of audiovisual instruction were then employed to plan a workshop program. Participants were divided into eight groups. A full day was devoted to each activity area. Each participant was given a "Manual of A-V Techniques by Dekieffer and A-V Instructional Materials.
- 3. Major Areas of Study included:

ERIC

- A. Films and 16mm Projectors; B. Filmstrips, Slides and projectors; C. Transparencies and Overhead projectors; D. Tapes and Records (Reading Lab) E. Programmed Instruction (Craig Reader, Tachomatic 500 Reader, Perceptamatic Reader, Language Master, Hoffman Reader, Language Master, Hoffman Reader, Tachistoscope, and Programmed Books); F. Dry Mount Press; G. Posters and Bulletin Boards and Opaque Projectors; H. Maps and Globes; I. Professional Books; and J. Additional Materials in the Center.
- 4. The workshop employed a director, four BIMC personnel and three professional consultants to conduct the workshops. Center personnel evaluated the workshop through the successful operation of equipment by participants and by a unanimous approval of the workshop by participant testimonial. Further evaluation by follow-up will include use of materials by participants in their teaching.
- D. Savannah City and Chatham County Project 025-025-67-S Tutoring Activity included 27 children from an institution for the neglected or delinquent child.
  - The stated objectives were "to improve reading" and "mathematics" achievement. Standardized test were administered in the areas of reading and mathematics on a pre-test and post-test basis to all participants. Mental Maturity tests were administered at the beginning of the Project. At the close of the Project an evaluation was conducted with the Project Staff.

- E. The activities in section "3, A, B, C and D preceding" were selected as exemplary and/or innovative for the following reasons:
  - a. Item "A" Detailed evaluation with an established control group.
  - b. Item "B" Detailed instructional materials and procedures used along with hours spent by topic. Utilized preplanning survey and incorporated recommendations for modification of a continued program.
  - c. Item "C" Included comments on survey, selection, participants, facilities, curriculum, treatment, procedures, evaluation and recommendations. Included parent involvement. Indicated negative as well as positive results and postulated recommend changes for a continuing program.
  - d. Item "D" Only program found which made specific remarks about an LEA operated program for the 'neglected and delinquent" or the "migrant" child.

#### INTERPRETATION AND COMMENTARY

Georgia school counselors reperted there were 14,418 dropouts, 8,361 dales and 6,657 females, from grades 9-12 for the 1966-67 school year. Current statistics are not available as to the number of this group who have re-entered schools in the fall of 1966.

8.5

Six hundred eighty four or 4.4 per cent of the total number of drop-outs in the "Upper fourth" ability group which was characterized by having more female than male drop-outs, drepped out of school primarily for marriage and secondarily for a lack of interest.

There were 1900 drep-suts or approximately 13 per cent of the total number of drep-outs in the "Second fourth" ability group. Twenty-six per cent of this group left because of a lack of interest; 18 per cent left to go to work; 18 per cent left because of marriage were female) and 7 per cent left due to difficult home situations.

Six thousand seven hundred five students or approximately 47 per cent of the drop-outs were in the "Lower fourth" ability group. Twenty-seven per cent of these students have left school because of a lack of interest; 19 per cent left to go to work; poor scholarship caused approximately 13 per cent of the students in the lower ability level to drop out; and 11 per cent of the drop-outs in this group were due to marriage. There was no ability data available for nine per cent of Georgia's school drop-outs; however, their primary reason for dropping out of school was also a lack of interest.

The school counselor, principal and/or teachers held exit interviews with 10,037 or 69 per cent of the drop-out studen This is a five per cent increase over the number of students given exit interviews during the 1965-66 school term.

## STATE OF GEORGIA DEPARTMENT OF EDUCATION

STATE OFFICE BUILDING ATLANTA, 30334

November 30, 1967

JACK P. NIX STATE SUPERINTENDENT OF SCHOOLS

ALLEN C. SMITH
ASSOCIATE STATE SUPERINTENDENT OF SCHOOLS
OFFICE OF SCHOOL ADMINISTRATIVE SERVICES

MEMO TO: Dr. Edward Barnes, Coordinator, Measurement & Evaluation Services 50 Whitehall Street, S. W., Atlanta, Georgia

FROM: Mrs. Mamie F. Marshall, Program Consultant, School Food Service 121 State Office Building, Atlanta, Georgia

SUBJECT: Evaluation of Title I School Food Service Programs

To assist systems in evaluating the School Food Service Project a suggested guide for evaluating this program was sent to all systems. Most of the systems used the suggested guide in evaluating the School Food Service Project. A copy of the memo sent to the systems is attached.

Many systems used the Food Record and Food Survey Forms to determine the adequacy of the diet and the role that Title I played in meeting the daily food needs. Some of the data secured by these instruments is given below.

A tabulation of 3,000 Food Surveys of students from 4 - 12 grade showed that:

- 1. Thirty-eight percent (38%) of those surveyed do not always have lunch.
- 2. Forty percent (40%) of those surveyed do not always eat breakfast.
- 3. (a) Approximately seventy percent (70%) have milk at lunch (milk at school.)
  - (b) Approximately twenty-seven percent (27%) have milk at supper.
  - (c) Approximately forty-four percent (44%) have milk at breakfast (influenced by supplemental feedings at school).
  - (d) Approximately twenty-three percent (23%) have milk between meals (again, influenced by supplemental feedings at school).

Dr. Edward Barnes Page Two November 30, 1967

- 4. (a) Approximately seventy percent (70%) eat meat daily.
  - (b) Approximately twenty-three percent (23%) eat meat every other day.
  - (c) Approximately seven percent (7%) eat meat once a week.
- 5. Only eighteen percent (18%) had a good source of Vitamin C daily.

Which means seventy-eight percent (78%) of these children consume an inadequate amount of this vital nutrient.

6. Only thirty-five percent (35%) consume one egg daily.

The Food Records of 265 eight year old boys and girls revealed the following concerning the adequacy of diets for these children:

## PERCENTAGE OF STUDENTS MEETING RDA

Dr. Edward Barnes Page Four November 30, 1967

From the results of the Food Surveys and Food Records it is apparent that many of these children have a diet which is inadequate in over half of the nutrients. If Title I did not provide these children with some nourishing foods during the school day the diets would probably be 40% - 50% lower in each nutrient.

It is apparent that nutrition education is greatly needed for these students in addition to supplying them with nourishing foods. A few schools made some progress in nutrition education both at school and at home. A pilot study for the 1967-68 school year is designed to measure the effectiveness of a nutrition education program in selected Title I schools and it is hoped this study will provide direction in nutrition education for these children.

The following comments from principals and teachers were reiterated in almost every evaluation of the 131 systems evaluating effectiveness of the Title I School Food Service:

- 1. Only balanced meal the child gets all day. (Before Title I, child brought bread wrapped in newspaper, or brought nothing.)
- 2. Increased attention span in classwork.
- 3. Children were more alert.
- 4. Increased stamina.
- 5. Improved coordination.
- 6. Increased classroom participation.
- 7. Fewer discipline problems.
- 8. Happier and more sociable. (Sullen personalities changed to a more overt personality.)
- 9. Reduced hostility and belligerency.
- 10. Learned to eat more nourishing foods at school and at home.
- 11. Fewer complaints of headaches and sickness from hunger:

One system reported:

"The lunches helped alleviate the tired headachy, listless children, upgraded their performance, and cut down on absenteeism."

Dr. Edward Barnes Page Five November 30, 1967

## COMPARISON OF ABSENTEEISM

BEFORE TITLE I SCHOOL FOOD SERVICE
1965-66

1966-67

Highest Absentee 72 days absent

24 days absent

Lowest Absentee 1 day

5 children with perfect attendance

Another system reported:

"Although lunch at school cannot be solely credited for the increased attendance, it is thought by the teachers and principals to attribute to the 33% increased attendance in 1966-67 over 1965-66."

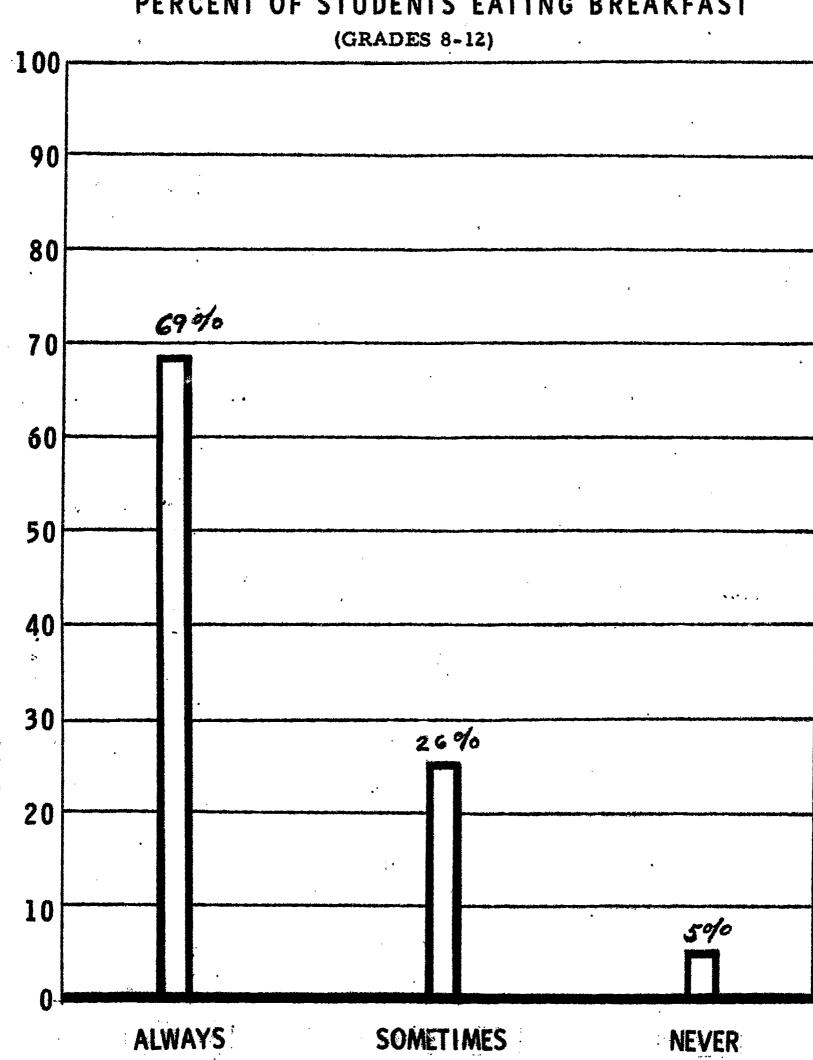

The schools which performed the Plate Waste Surveys reported that there was little or no plate waste in most cases. In cases of plate waste it was usually attributed to an unfamiliar food.

Attached are some "Case Reports" and "System Evaluations" which are samples of the kinds of progress that is being attributed entirely or in part to the Title I School Food Service Program.

From all the reports submitted there is little doubt that Title I School Food Service has given impetus to the teaching program and the physical, mental and emotional development of the participating children.

Project Number: 121-121-67-3R Activity: Food Services - Lunch

## ATTACHMENT 12, PART III

There were more unique experiences which developed from the onset of this activity than space could afford to elaborate, but a few will be discussed. Che student who had over the years been a chronic absentee had almost perfect attendance after this activity was initiated. This student's teacher felt that the primary reason for this change was due to the lunch program.

There was a ten year old boy who was very retarded and had a sullen and belligerent attitude about school but when he was placed on the Title I program became a different individual. He began talking to his teacher and seemed to have a feeling of "belonging." He volunteered to help in the lunchroom and his school attendance increased.

These are two of many instances in which individuals were noticed to have changed after this activity was initiated. In all schools there was a noticeable change in appearance, interest, attendance and progress of the students involved.

ERIC\*

Richmond County

Project Number: 121-121-67-3R Activity: Food Services - Lunch

## ATTACHMENT 13, PART III

The main instrument used in this activity for evaluation was a narrative written by each school stating what successes, had been noted in their particular situation. The following is a summary of their conclusions:

- 1. Children became interested in their school work after having a balanced meal everyday.
- 2. An increase in school attendance was evident under this program.
- 3. An improvement in appearance of the students involved was observed.
- 4. The children developed a feeling of belonging and there was improvement in teacher-student relationships.
- 5. Students participating in this activity gained weight and had more energy to participate in their school activities.
- 6. Parental attitudes as well as student attitudes toward school showed significant improvement.
- 7. The equipment received under this activity aided in increasing the efficiency of the lunch program by decreasing the time needed to prepare lunches or the number needed to prepare lunches.
- 8. A greater variety of foods were purchased and better menus were planned and served.
- 9. The equipment received made it possible for more students to eat hot lunches.
- 10. That the general conduct and morale of the students under Title I improved thereby improving the general atmosphere of the whole school involved.

Activity: Food Service - Lunch

## ATTACHMENT 10 - PART III

U

ERIC

In all schools involved in Title I there was a positive change in student attitudes, interest shown and attendance. There was an increase from lightly to considerably in average attendance of those involved in this activity. Teachers were quick to express a feeling of gratitude in having had the privilege to work with this activity. They were quick to give examples of students whose grades had improved or how much happier the students acted. General conduct of students in Title I improved. Their appearance improved as well as their work habits. They became more alert and interested in their school work. Their span of attention increased as they were provided with a well balanced meal. Most of these students actually received only one good meal a day and it was at school in this program; one principal said, "Since the initiation of Title I lunch program, there has been a great improvement in the attendance, academic work, appearance and the general attitude of the students who participated in the program. Many students who seemed listless and uninterested in class work began to become interested and attempted to do class assignments." Positive changes in parental attitudes toward the schools was significant. Parents sent their children to school more regularly and worked cooperatively with the schools' programs.

Although the greatest amount of increase in school lunches was with Title I there was a noticeable increase in other students participating as a result of Title I. As has been stated there was an increase in attendance and this resulted in better self-discipline of the students. It would be hard to say that an increase in academic ability could be traced directly to the lunch program, however, with better attendance the opportunity to learn was enhanced.

EVALUATION -FOOD SERVICES

Number Twelve - Attachment Twelve - Part Three

Anecdotal observations suggest that two particular things stand out in the food services program. One, the students are exposed to new foods which in their normal eating habits have not encountered previously. Second, these new foods actually carry over into the family environment and the student's parents are also introduced to new foods. The second major contribution of the food services involves the balanced diets to which the students are exposed.

MATILDA HARRIS ELEMENTARY SCHOOL 911 Ready Street St. Marys, Georgia 31588

(212) Food Service - Lunch Attachment 12, Part III Project No. 020-020-67-1

Children enjoy eating in the lunchroom. One day last winter a third grade child, who is served a free lunch and extra milk and raisins or orange juice, had to stay home because he had the measles. He told his sister to tell his teacher to send him his lunch.

Children have come to school when they should be home in bed because of fever and colds. One parent was asked why she let her little son come to school when she knew that he was too ill to be in school. She remarked, "I couldn't keep him home. He said they were going to have fried chicken for dinner."

TAYLOR COUNTY ACTIVITY 212 ATTACHMENT 6 - PART III

A thorough investigation of 150 pupils' dietary eating habits were needed to determine the kind and amount of food eaten outside Title I Food. Also to determine whether faulty food or correct meal patterns were followed at home. This investigation was also needed to further determine the physical defects needed to be corrected.

The Georgia Food Survey and Record Forms were used to collect the above information. This group analysis revealed that 90% of the group had meals consisting of the following: corn bread, syrum, dried beans, potatoes, rice fatback and greens. These foods were eaten at no particular meal hour and were highly constituents of carbohydrates.

An examination of the days' dietary reveals that when the total foods eaten compared with the recommended daily allowances for each child, the diet was far below standard.

As a result of the study, the following facts were also revealed:

- 1. Almost half of the students were undernourished.
- 2. Poor eating habits
- 3. Low income of parents
- 4. Stereotype foods
- 5. Parents left home too early to prepare a meal
- 6. Broken homes were obvious
- 7. Poor table manners
- 8. Days when there was no food.

Each child's height and weight was recorded and compared with a height, weight, and age table for boys and girls.

From the data presented, it should be apparent that these children needed diets suitable for building up their bodies, which has suffered for some time from an insufficient food supply. The School Lunch Program provides daily nutritious meals which will aid in alleviating some of the deficient needs of these children. Orange juice was served daily as a supplementary food. Each child was served approximately 1½ oz. of meat, ¼ cup of vegetables, ¼ cup of dessert, ½ pint of milk and the average serving of bread.

The plate waste Survey Form for Title I meals were used to determine how well the pupils were eating Type A lunches. Most of the plate waste were believed to be due to the pupils not having been accustomed to eating such type A foods.

The techniques used in this Descriptive Survey showed substantial progress made by the pupils affected by the project.

The evidence from this evaluation will further lead us to believe that definite changes in attitude, behavior and scholastic traits will continue to improve through the continuous serving of daily nutriticus meals.

## BOARD OF PUBLIC EDUCATION HENRY A. HUNT ELEMENTARY SCHOOL 990 Shurling Drive Macon, Georgia 31201

## TITLE I - NUTRITIONAL PROGRAM

The nutritional program, as funded by Title I of Public Law 89-10, has had a direct and significant impact upon the improvement of the total school experiences of the pupils enrolled in the Henry A. Hunt Elementary School, Bibb County, Macon, Georgia, during the 1966-67 school term. The school life of the 81 pupils budgeted for lunches under the program has been more enjoyable, meaningful and effective. School wide, all pupils have been tremendously helped from the services received from the professionally trained nutritionist, as provided for in the program, who worked very cooperatively with the Manager of the Food Services Program in planning menus and general food preparation.

Some noticable improvements are listed below:

- 1. Increased interest of pupils in their overall academic achievement.
- 2. Improved attendance in school and a feeling of acceptance and security among participating pupils.
- 3. Increased academic achievement in all subject areas.
- 4. Improved interaction between teacher and pupil as far as attitudes are concerned.
- 5. The pupils' lives affected as following:
  - a. Their bodies...they have grown stronger and are better able to work.
  - b. Their minds...they have learned much through the process of eating. They have also learned about:

New food-how they look-taste-smell
The different ways foods are served
Meal time as a pleasant time
Getting along with people as he eats with them.

Laurens County Board of Education

ATTACHMENT 12 - PART III

In working with families of low-economic background I find that values of certain experiences are poor in some instances.

I had the experience of carrying out a unit "FOOD IN OUR LIVES" with an adult group. This unit involved self-evaluation and/or family-evaluation of foods served or eaten in the homes. From this survey, it was learned that: foods of high nutrient value were rarely eaten or completely omitted from the daily meals. Foods were not selected from the basic food group, thus causing unbalanced diets; foods "not liked" were not included in menus; and the various kinds of foods were eaten any time of day.

As a result of this unit, a breakfast was prepared as a classroom learning situation so members could learn the important steps in "Meal Planning and Preparation." The breakfast consisted of foods not usually eaten at home.

#### STEPS INVOLVED WERE:

- 1. Learning the "Basic four Food Groups."
- 2. Preparing a breakfast menu from this grouping.
- 3. Making Charts illustrating the "Breakfast."
- 4. Assembling recipes.
- 5. Preparing buying lists.
- 6. Preparing Calorie Count of individual serving of food.
- 7. Cost per serving.

ERIC

- 8. Preparing material list of things needed to set up a breakfast room.
- 9. Designating members for work areas (table setting, cooking, etc.) A follow-up included a written report by members on "My learning experience in Breakfast Planning and Preparation.

Montgomery County Board of Education

Project Number 131

#### Part III Attachment 10

Title I was effective in enhancing educational opportunities thru the lunchroom program in that pupils who were oronic absentees due to a lack of funds on food were able to attend school regularly and as a result were able to keep up with their classwork.

Title I program made it possible for large families with small incomes to enjoy at least one well balanced diet daily with a small fee. Moreover, some students eating under this program had the unusual opportunities of developing eating habits that were not encouraged at home; i.e. using proper silver for food, sitting in a family setting, and proper chewing foods, etc.

Superintendents' Memo No. 15

To:

Superintendents

City and County School Lunch Supervisors

From:

Miss Josephine Martin, State Supervisor

School Food Service Program

Re:

Evaluation of Food Service Program for Title I Projects for 1966-1967.
Revised instructions for Title I applications require built-in evaluations.
Therefore, the purpose of this memo is to provide guidelines for planning these evaluations.

Attached is the evaluation form to be used in evaluating school food service programs receiving financial assistance from Title I funds.

There are various resource people that will be able to assist teachers and you in collecting the data for this evaluation. These include public health nurses, public health nutritionists, or home extension agents. Perhaps your local medical group would be interested in cooperating with you in securing some of the data for this evaluation.

Food habit survey forms, which are to be used in evaluation, are attached. Each system may reproduce them as needed. This survey will need to be conducted at the beginning and end of the project.

Sample growth record forms are attached. Additional forms may be ordered from the National Education Association for 10 cents each. These forms may be used for the same pupil year after year. Heights and weights will need to be secured at the beginning and end of the project.

Plate waste survey forms are not included. These will be sent in July.

If hemoglobin analysis can be made, it should be done at the beginning and end of the project.

In summary, all information under Achievement of Title I Projects must be secured at the beginning as well as at the end of the project to measure change. The only exceptions to the above statements are numbers 9, List of Equipment, and 12, Workshops and Training Programs, which need be done only at the end of the project.

Submit evaluation data thirty (30) days after starting the project and again thirty (30) days after completion of the project to the state office. Please include name and position of the individual preparing the evaluation.

110

Mrs. Mamie Marshall, School Food Service Program Coordinator, on the State Staff is available to assist you in your planning of Title I Food Service Projects. Please know that all members of the State Staff are ready to assist you upon request.

ERIC"

# Evaluation of Food Service Programs for Title I Projects

This evaluation form is to be used for evaluating School Food Service Programs receiving Title I funds. To evaluate change, it is necessary that this evaluation be done at the beginning and end of the project. It is required that these forms be submitted thirty (30) days after the close of the project. Answer the questions on separate paper and attach summaries of all forms used.

Following is a diagrammatic sketch to show the role the School Food Service Program plays in the development of the child - physical, social, and mental development. Through this evaluation, it is hoped the total development of the child can be evaluated.

# PLATE WASTE SURVEY FORM FOR TITLE I MEALS (A Suggested Evaluative Instrument for Determining How Well Pupils are Eating Type A Lunches)

This is a class survey rather than an individual student survey. This survey is to be performed on at least 1/3 of Title I students in a class, if it is not possible to include all Title I students in the survey.

To determine the amount of food consumed:

- 1. Measure or weigh the amount served to the class. Record this amount in Column B.
- 2. Measure or weigh the amount of food uneaten. Record this amount in Column C.
- 3. Subtract the amount of Column C from Column B. This difference will be the amount consumed by the students.

Items should be recorded in either weights (ounces or pounds) or measures (cups, pints, or quarts). Be consistent in the weight or measure unit used for the individual food items. For instance, if weights are used for meats in Column B, weights should also be used in Column C and D.

To determine amount served:

a. Make arrangements for measurement and recording to be done by a specific group or person.

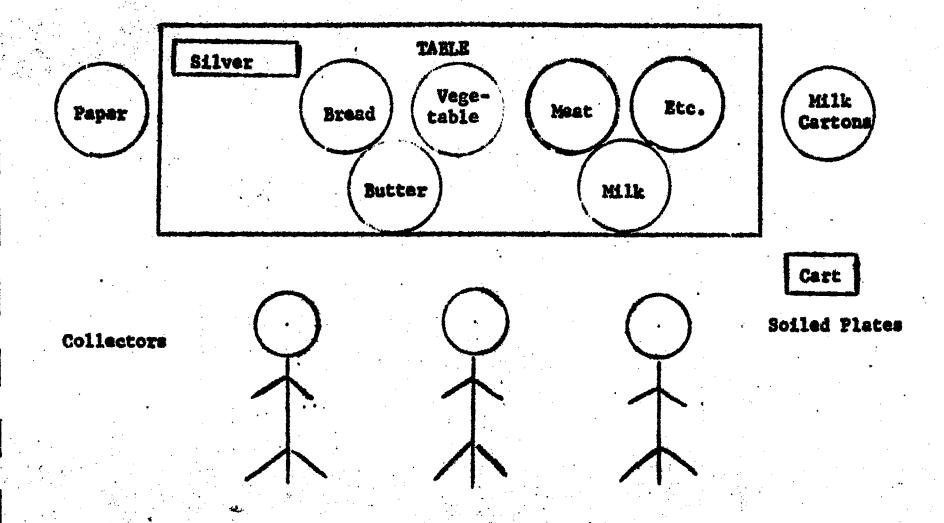

To determine amounts eaten:

a. Station individuals collecting plate waste at dish return area. Separate foods into the respective containers for measuring or weighing the total uneaten by the class; for example, one container would be for meat, another for peas, tomatoes, tossed salad, etc.

#### ORGANIZATION OF PLATE WASTE STUDY

### Note to Teachers:

Involvement of students in Plate Waste Study can provide learning experiences in measuring, weighing, costing food, etc. A Plate Waste Survey reported to the manager gives clues on food likes and dislikes as well as preparation practices.
